Summary

This ±565-acre, rail-served industrial tract in Orange County, Texas. Located on FM 1006, known as "Chemical Row." The site has excellent available infrastructure, with numerous adjacent pipelines, dual rail service, and has marine access via the Port of Orange dock and a proposed barge dock berth on Cow Bayou. The site is strategically located in the Upper Gulf Coast market approximately ±20 miles east of Beaumont.

FEMA Flood Hazard Category

350 Pine Street
Beaumont, Texas 77701

Phone: 1-800-729-7483
txed@entergy.com

entergy-texas.com

The digital Q3 Flood Data product is a digital representation of certain features of Flood Insurance Rate Maps (FIRMs) that is intended for use with desktop mapping and GIS technology. The digital Q3 Flood Data provide basic guidance and a general indication of the location of high-risk flood areas called Special Flood Hazard Areas (SFHAs), the areas subject to inundation by the base (1-percent-annual-chance, or 100-year) flood.
The digital Q3 Flood Data do not replace the effective FIRM. FEMA designed the product to support planning activities, some Community Rating System activities, insurance marketing, and portfolio reviews. Base Flood Elevations are not included, so the application of the Q3 Flood Data files for engineering analysis, particularly for site design, or rating insurance policies for properties located in an SFHA is limited. The digital Q3 Flood Data should be considered an advisory tool for general hazard awareness, education, and floodplain management.

Summary

Firestone FEMA Flood map shows site is mostly located in Shaded Zone X. Shaded Zone X is defined as areas between limits of the 100-year flood and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one square mile; or areas protected by levees from the base flood.
The site also contains areas located in SFHA / Zone A. Areas of 100-year flood; base flood elevations and flood hazard factors determined.

National Wetlands Inventory

350 Pine Street
Beaumont, Texas 77701

Phone: 1-800-729-7483
txed@entergy.com

entergy-texas.com

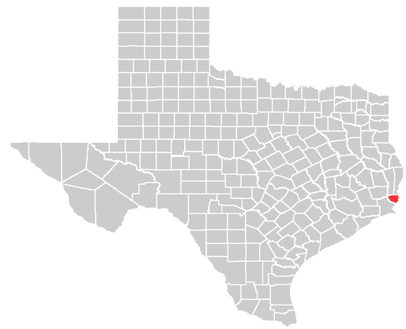

Summary

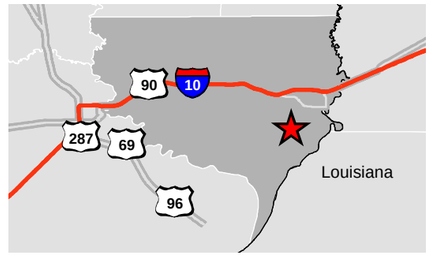

The National Wetland Inventory shows Freshwater Emergent Wetland and Freshwater Forested/Shrub Wetland areas on the property.
PEM1A is Palustrine, Emergent, Persistent, Temporary Flooded.
PEM1C is Palustrine, Emergent, Persistent, Seasonally Flooded.
PSS1A is Palustrine, Scrub-Shrub, Broad-Leaved Deciduous, Temporary Flooded.

The National Wetlands Inventory Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.
